PROJECT MANAGER MEDITECH Systems

Position Opportunity

Jacobus is currently seeking qualified associates to fill Project Manager engagements throughout the United States. This position is available for either sub-contractors (1099's) or full-time employees.

About Jacobus

Jacobus Consulting is a leading healthcare IT services firm that partners with providers to improve healthcare outcomes and streamline operations through excellent project management, improved clinical systems, revenue cycle performance optimization, and healthcare information systems. In the face of changing healthcare industry technology, regulatory demands, and financial landscape, we provide a complete suite of solutions to assist providers to improve quality measures and patient care, optimize operational efficiency, and lower costs.

About This Position

The Project Manager is responsible to be the single overall coordination, management, and communication point of all project activities and is a constant source of initiative communication to both the organization as well as the entire project team – including any and all outside resources and vendors. The Project Manager responsibilities also include the management and delivery of the overall project plan(s) developed in Microsoft Project including resources, timelines, risks, budget, etc.

The Project Manager reports to the overall Organization Project Sponsor and Project Steering Committee and assists with recommendations for staffing both internal and external (consultants) and provides overall direction and guidance to all project teams and specific project resources. The PM keeps the overall project activity closely aligned to the organization leadership strategic objectives. The PM also provides an ongoing source of communication with the MEDITECH HCIS Coordinator as well as Other Vendors on the project.

The Project Manager defines the project charter, standard use of tools, methods and approaches to be used by the project teams. The PM also facilitates decisions on risks, scope and change control within governing bodies and drive the project to meet all success factors and goals. The PM should be knowledgeable regarding the impact of systems on the integrated delivery network as well as inpatient and ambulatory operations.

Required Skills & Qualifications

Strong track record of Project Management and experience with managing and successfully delivering Healthcare IT Systems (HCIS) implementations strongly preferred. Familiarity with hospital applications preferred, especially clinical, revenue cycle and other mission critical processes. Knowledge of the dictionaries, build tasks, and best practice implementation for the MEDITECH HCIS system and IT infrastructure. Ability to develop and manage highly detailed and extensive Microsoft Project plans. Direct teams to evaluate and test system code changes relative to the changes in the state of hospital operations. Ability to manage project plan tasks, issues logs risks, and creates status reports. Uses industry standard change control practices. Ability to supervise and train other project staff involved in the project. Ability to manage the budget of the project for resources and expenses. Previous proven Project Management experience is required.

Required Certifications

Project Management certification preferred but not required.
