SIEMENS MS4 CLINICAL INFORMATICS CONSULTANT

Position Opportunity

Jacobus is currently seeking qualified associates to fill positions for throughout the United States and Canada. This position is available to sub-contractors, full-time employees, OR both sub-contractors and full-time employees.

About Jacobus

Jacobus Consulting is a leading healthcare IT services firm that partners with providers to improve healthcare outcomes and streamline operations through improved clinical systems, revenue cycle performance optimization, and healthcare information systems. In the face of changing healthcare industry technology, regulatory demands, and financial landscape, we provide a complete suite of solutions to assist providers to improve quality measures and patient care, optimize operational efficiency, and lower costs.

About This Position

Work with healthcare organizations that are implementing Siemens MedSeries4 Clinical Suite implementation, or other major technological projects, to first examine their existing processes for opportunities to change, add, or eliminate any steps that are no longer adding value. Develop process redesign as a strategic initiative to improve the quality, cost, and safety of patient care by redesigning manual processes for greater efficiency and supporting them with new technologies and improved processes. Working within the framework of the Siemens MS4 Clinical Suite System to provide organizations with a reliable approach that focuses on clinical content, system functionality, and processes to ensure their technology investment is delivering the highest possible results.

Assists the client by providing data (clinical and business related) in order to make sound operational decisions and provide expertise to system design, build, testing, and optimal implementation. Analyzes needs and develops hardware, software solutions and interfacing requirements for all nursing and ancillary services.

Knowledgeable regarding the impact of nursing and ancillary systems on the integrated medical record (EHR), clinical documentation system, and the inpatient and ambulatory order entry systems. May perform project management responsibilities including charter and scope development, project plan development, task development, testing, and training.

Required Skills & Qualifications

Experienced working as a Clinical Informaticist or Clinical Analyst in an acute care setting required. Knowledge of the clinical processes, system tables, build tasks, and best practice implementation for MS4 Clinical Suite modules required. Ability to manage project plan tasks, issues logs risks, and create status reports. Uses industry standard change control practices. Ability to supervise and train other IT staff involved in the dictionaries and build.

Required Certifications

RN or LPN/LVN preferred, BSN preferred
