Siemens New Module Implementations & Optimizations

Jacobus Siemens expertise covers all modules for planning, design, build, test, go live, training and support for single or multi-facility implementations. In all implementations, we go beyond table structure and migration in order to align end user requirements and workflow processes.

We design for objectives that include meaningful use, clinical documentation optimization, decision support, ambulatory integration, HIE, patient safety and quality, revenue management, and a patient friendly experience. Our methodologies establish optimal governance and project team structures so work progresses efficiently, timelines are met, budgets are accurate, and user adoption is maximized.

For over a decade Jacobus has assisted healthcare providers to get the most from their Siemens Invision, Soarian and MedSeries 4 platforms. We provide the complete lifecycle of services that support implementation and optimization, including: assessment, planning, project management, process redesign, system design and build, testing, training, go-live and deployment.

Our Siemens Clinical Suites and Revenue Management experts bring proven knowledge, tools and methodologies for EHR, Meaningful Use, HIE, Clinical and Quality Transformation, and Revenue Cycle improvement initiatives.

“I've worked with Jacobus at 3 hospitals to address some difficult challenges and to improve revenue cycle operations. Their approach breaks down silos and creates lasting improvement, and drives significant increased revenue and cash collections. I am impressed with the quality of the Jacobus team – they are highly motivated, skilled and have a way of making the staff feel safe and valued.”
